Moving Beyond Analytic Engagement: Using Game-Based Design To Stimulate Action on the Internet Posted by Ed Lee on September 24th, 2015 A growing number of researchers and practitioners are now learning to effectively leverage the popularity of the Internet and mobile devices to produce sustainable change in individuals, organizations, and even large groups of people. This includes research and development activities that are driven by the potential of Internet and mobile technologies to create new opportunities for learning and education, as well as more traditional social and behavioral change programs that use the Internet and mobile devices to boost participant motivation and engagement. One example of such an effort is Ed Lee's recent research on Game-Based Design, which builds on his earlier work that examined the potential of game-based learning environments to engage learners and promote sustained use of new technologies (see this post). Game-Based Design – the current state of play Traditional learning environments have not kept up with the increasingly intense pace of technological innovation. There are a number of reasons for this, including the difficulty of building and maintaining learning spaces that match the high cognitive load of modern technology (such as the Internet and mobile devices). Moreover, learning content and the educational technologies that support it have traditionally been top-down, rather than more closely aligned with learning needs, and therefore, not sustainable in a world that demands constantly increasing change and continual improvement. In his article, "From Formal Instruction to Digital Fluency: Why the Ubiquitous iPhone Is A Problem for Education," Richard Allen wrote, "We have invented a system of education that revolves around the acquisition of information, but we have not made it possible for the child to actually know anything." Game-based learning has emerged as a response to this challenge. It borrows from the developmental framework of cognitive psychology and works to build foundational skills of curiosity, communication, collaboration, and critical thinking in everyday environments. Game-based learning environments (GBEs) make it possible for people to learn in a completely different way than has been possible before. Participants are free to experiment, explore, and control the pace of their learning, rather than being forced to endure a prescribed, linear path through a fixed set of content and exercises. While this application is specifically designed for Mac users, it can work on Windows as well. Main Features As mentioned above, this application lets you create calligrams with images. You will have to specify the paper size, the orientation of the image, and the background color. With Calligram Creator, you can create either ordinary calligrams or logograms. If you are looking for ideas, there are various templates to get you started. For even more ideas, you can find others that you can download and save locally. The application lets you save your creations to a gallery, print them, or email them. In case you are looking for a means to share your calligrams with friends and family, you can use the built-in email service to send them. However, xTag Generator has no built-in gallery, a feature that makes it more convenient for you to edit and save your calligrams. LazyPoster Creator is another tool that will help you create high-resolution calligrams using images. Similar to Calligram Creator, the application allows you to choose paper size and paper type, to design the poster, and to create an HTML code for it. I have recently found out that a ladder is a metal object that's made in a ladder shape, and that people who climb ladders are called ladder operators. The roman version is ladderius. The wiki says it's very rare but is unrelated to the noun. My friend also tells me that it's a misnomer that's been around for ages, and I said that it seems odd that people would call people who climb ladders ladder operators. Is he correct? A: "Ladder" comes from the Latin, ladere, meaning "to climb". Operas means people who climb ladders, literally. It is probably not a misnomer at all. // Copyright (c) 2012 The Chromium Authors.
