

Groobypass.com is a leading producer of the most extreme, hardcore and erotic sports and fitness content. Groobypass.com is a #1 destination for amateurs and professionals alike who are looking for the most extreme hardcore and erotic content on the net. Basic Microphones for Sound Reinforcement Basic microphones are essential for a sound reinforcement system. A few examples below: Hybrid Format Condenser The Sarno 90-15 is a high input impedance, very high level condenser microphone, designed for use with MacAlester 32 Output modules and with many other output modules that have a 110 ohm mic input. It is a sharp and fast moving diaphragm condenser with a low noise figure. Connecting with a 3.5 mm stereo jack. Smoke Microphones When smoke is present in the sound reinforcement system, it is essential to have microphones that can handle a variety of situations. We have Microphones that are both cardioid and hemivoice pattern for handling the smoke in an indoor sound reinforcement system. Fruit Microphones Fruit is one of the many types of microphones that may be needed. For the very high-level fruit boxes, the microphone needs a minimum of 200 WPCS and most need 400 WPCS. This typically means that a cardioid microphone is required and that the mic needs to be placed at least 15-20 feet away from the sound source. Document/Videotape/Cameras Document mics are required for professional recording in sound reinforcement. Some of these mics need to be placed at least 15 to 20 feet away from the sound source. The level of the diaphragm is usually 0.2-2 microns. Desktop Recording Microphones Recording Studio Mic's A microphone that is used in studio recording is a very different microphone from a live microphone. For example, the Dr M-140 is not used for a live microphone. Some of the characteristics that will help identify studio microphones include a cardioid pattern, full range, and being able to handle high SPL. Housing for Microphones When a mic is placed in a sound reinforcement enclosure, it is important that it is protected from the elements. If the mic cannot be protected, then it will need to be removed from the sound reinforcement system when the sound is not at a high level. The housing should fit the microphone 570a42141b
