Following sub-title: When we wish to install a software for the first time, there are two ways: 1.1. Create new image of Windows. 2.2. Just install the software. But when we install the software many times, then we use the option from above two ways. So in this tutorial we will see how to create an image of Windows or reinstall any Windows in single click. We have a tool called nLite that will help you to remove all the preinstalled programs of Windows, also known as the OS (Operating System) So we can clean any software or programs that are already installed on your computer, removing all the unwanted programs or freeware apps that you may not know about. The program has a series of different add-ons, in which you can choose whatever program you want to be included or not. The program is very easy to use, just follow the instructions and you will be able to find the easiest way to remove any unwanted software. So you will have the best solution for any problem that you have installed on your computer, or if you just want to clean any program, your operating system or any Windows software. If you want to make your own original desktop background, you can do it easily with GIMP (the GNU Image Manipulation Program). G

Addon #1: By using this addon, the user will be able to remove the Windows 7 footer from the bootable image, to speed up the process of installing your OS, making it more convenient to do it when you want to install Windows. You also have the option of using a different footer if you want. It comes with a repair utility that will allow the user to easily restore Windows if the system is not bootable. In this case, the user must choose a repair disk and the repair tool will automatically install the windows image from the repair disk. It also has a list of recovery options if the user has a windows installation and the installation disk is also included in the program. Here you have the list of the recovery options to be used by the recovery tool: - Hard Disk: To get a repair disk from a hard disk. - Floppy Disk: To get a repair disk from a floppy disk. - Installation Disk: If you have installed a windows 7 on your hard drive and now you want to restore it back to an installation disk. - Registry: Will help the user to recover a corrupted registry. - Software Installation CD/DVD: The user can use this option to install a program which is not installed. It will ask the user to insert a CD/DVD where the program will be installed. - Internet: This tool will allow the user to recover a lost internet connection or if the user just want to reinstall the internet. - CdRom: This will allow the user to recover a lost CdRom or a corrupted CdRom. - DOS boot disk: This option will allow the user to recover a corrupted boot disk. - ISO: This will allow the user to recover a corrupted ISO file. - Floppy Disk: This will allow the user to recover a corrupted floppy disk. - File: This option will allow the user to recover a corrupted file. - CD: This will allow the user to recover a corrupted CD. - USB: This will allow the user to recover a corrupted USB. - IMG: This will allow the user to recover a corrupted IMG file. - IMG: This will allow the user to recover a corrupted IMG file. - IMG: This will allow the user to recover a corrupted IMG file. - IMG: This will allow the user to recover a corrupted IMG file.
