the Help menuQ: error: expected identifier or '(' before '*' token I am porting an existing C++ code to an Arduino project using the cross-compiler and I am getting this error for some code: error:

expected identifier or '(' before '*' token For example : #define _CRT _SECURE_NO_WARN INGS #include #include using namespace std; .... void setup() { Serial.begin(115200); } void loop() {

Serial.print(time(0) /
86400.0);
Serial.print(':');
Serial.print(time(0) %
86400.0);
Serial.println(); } A: By
default, #define macros
are not defined when
you pre-compile with a

C++ compiler. You need to define the macro before pre-compiling. E.g. add a line like this: #define _CRT_SECURE_NO_WARNINGS It is defined in CRT_SECURE_NO_WARNINGS.h, and it is

either 1. #undef CRT_S
ECURE_NO_WARNIN
GS (this is how it was
defined before) or 2.
#undef CRT_SECURE_
NO_WARNINGS in a
global #include directive
(as of __cplusplus being
defined to 201103L).

#undef CRT_SECURE_ NO_WARNINGS, however, was added in C++11 (now under-documented in C++11). Q: .NET - Performing a DELETE query based on a condition I am stuck with a query that

requires deletion of a row in database based on a condition. The main problem here is that there is no WHERE clause to find the rows to be

What's New in the Deba Eclipse Util Plugin?

(1) Installs on Eclipse IDE and provides the best appearance on your Eclipse IDE. (2) Include the best version of Eclipse Downloader. (3) All functions are integrated. (4) Provides

useful features. (5) Do not need to change the original file system. (6) Easily edit or add new features. DEBA Eclipse Utility is a small utility designed to bring out the best productivity, save time and gain more

efficient time. Features: 1. Copy file path, downloads file path, files to the clipboard, and many more. 2. Send files and folders to the desktop, and many more. 3. View files in the Explorer, see the

search results, and many more. 4. Send to the control console. 5. Capture screenshots. 6. Full-screen mode activation and deactivation. 7. Show and hide the menu window. 8. Undo and

redo menu (Only for org.eclipse.ui.menus plug-in). 9. The log file viewer. 10. Editing and editing searches. System Requirements: Eclipse 3.2 or later Eclipse Package Explorer 2.0 or later Eclipse SDK 2.0 or

later Windows XP Service Pack 2, SP2 or later. Windows 7 Service Pack 1, SP1 or later. Read More This is a standalone program called MSU-LMSA. It is a GUI application that illustrates the

Mathematica notebook interface via a simple (but clean, clean, clean) design. You can use the notebook to explore other functions of Mathematica in a familiar environment. Alternatively, you can

switch among different notebooks to treat different functions of Mathematica separately. The main difference between MSU-LMSA and Mathematica itself is that MSU-LMSA is a standalone program, but

Mathematica is a full-fledged application. So you can use MSU-LMSA in the same way as Mathematica. You can specify every command line option of Mathematica in MSU-LMSA as well. (Within

Mathematica, you can specify command line options for a notebook only.) If you specify option names in MSU-LMSA that are not in Mathematica (e.g., option letter, full-screen mode), MSU-LMSA

will ignore the options. In addition to illustrating Mathematica's notebook interface
