Whether they are covering their operations or providing up-to-date management commentary, it's common to find companies talking about the optimism and optimism of their forecasts over recent years. Let's take a look at a recent example: What is happening is that the next three years in aggregate operations are likely to show strong earnings growth. But in order for that growth to continue, the underlying conditions need to continue, so the longer term outlook remains more challenging. It seems like the company has a fairly clear grasp of these conditions and their effect on the broader economy, but I'm not sure if they have a good understanding of their own sales and profitability levels. [READ MORE] Sustainability Management for Companies In Transition Last year, as many large and medium sized businesses were wrestling with how to meet increasingly demanding government regulations, there was heightened interest in sustainability. We were one of the few companies to show the broader business value from a green brand perspective – including in the highly competitive utility infrastructure market. Learn how that insight has enabled a tier-one utility to improve its brand positioning and increase its customer base as it builds its name, knowledge and market leadership [READ MORE] If this year's performance is similar to last year's, we can expect to see some results come through at the end of the year that are consistent with that narrative. But that headline doesn't encapsulate the complexity of these transformations – how to change the corporate operations, the company culture and even the relationship with customers, suppliers and stakeholders. The promise of a consistently greener future can also lead to the need
