* **Photoscape Basic** includes editing features as well as a web browser so you can design the layout for your page and even preview it before you insert it into your site. However, the interface is completely different from the rest of Photoshop. (The buttons, menus, and toolbars look

different, and the interface bar is not there.) In fact, Photoscape Basic (see Figure 2-1) looks more like the Painter computer program than Photoshop.

Q: What's the difference between the Enterprise Remote Control and the Enterprise Remote Surveillance? CES recently released two products that are meant to improve productivity within a corporate business. One is called the Enterprise Remote Control, the other is called the Enterprise Remote

Surveillance. Can anyone tell me the differences between these two? Why would a business buy one over the other? A: I've had little contact with the product but it seems to me that:

Enterprise Remote Control: Allows a user (who may be in different branches, at different sites or working remotely) to view the context of their system (which apps are running and which projects are open) from a central location. When I looked at the sites I could see that they were working remotely.

Enterprise Remote Surveillance: Allows users to see remotely what the system looks like and the apps that are running. I don't know

how/if they can report metrics and perhaps how much they can do using the enterprise remote control versus the enterprise remote surveillance. What is Enterprise Remote Control What is Enterprise Remote Surveillance More than likely the two products are related and will be sold together. I'm sure they'll have a couple of extra buttons on the remote control for some of the control functions of the surveillance and vice versa. I'd be interested in seeing the difference.
